

```
1 console.log('Javascript')  
2 console.log('Is a really cool')  
3 uploadAsync('3-gig-cat-meme.jpg')  
4 console.log('language.')
```

Asynchronous Example

```
1 console.log('Javascript')  
2 console.log('Is a really cool')  
3 uploadAsync('3-gig-cat-meme.jpg')  
4 console.log('language.')
```

Um, so how does async work?

Getting into the callstack & event loop
